ABSTRACT

Cancer is one of disease having drug therapy with narrow therapeutic index and high doses that lead to adverse drug reaction (ADRs) in the patient, thus it makes necessary to monitor therapy. Pharmacovigilance is the science aimed at monitoring the safety of drug particularly important in oncology minimizing the toxicity. Almost all the antineoplastic drug used conventionally for therapy are found with ADRs. Present review aimed at identification of various antineoplastic drug with ADRs and their management.

KEYWORDS: Pharmacovigilance, oncology, ADRs, safety
